

# Halfen AnkerCAD 1.2 Embed Utility for AUTOCAD Systems

## Introduction

AnkerCAD is an AUTOCAD drawing utility that inserts 2-D drawings of Halfen anchor systems by means of a pull down menu (AUTOCAD v13 or higher) or a side, pull down, and icon menu (AUTOCAD v11 and v12). The menu contains all eleven Halfen anchor channel profiles. A bolt menu is available for AUTOCAD v13 or higher. Selecting any of the anchor channel profiles produces sub-menus dedicated strictly to the profile selected. Each profile sub-menu consists of 7-9 anchor channel elevations, 2 profiles, and 1 isometric. Selecting the Bolt menu produces a sub-menu with all anchor channel series. In each anchor channel sub-menu, the bolt sub-menu will appear to allow the selection of the desired bolt.

## Installation of AnkerCAD

The instructions assume that AUTOCAD is located in the C: drive. Adjust the following commands to suit your drive and file specifications.

The AnkerCAD folder contains two setup files: one for versions 11 and 12, and one for versions 13 and higher. The instructions do not change any of your computer configurations. It will only extract the files in the recommended folder.

1. The CD does not Autorun, so go to My Computer and double click the Anker Tools CD.
2. Double click on the AnkerCAD folder.
3. Double click on the appropriate setup file that correlates with the AUTOCAD version you are running: either version 11 and 12, or version 13 and higher.
4. If you get a pop-up that states the publisher could not be verified, just click **Run**.
5. A window will appear to indicate the location where the file will be saved, which is C:\Halfen. If the directory doesn't exist, the program will create it. Click on **Unzip**.
6. When the self-extractor is done, it will indicate the files were successfully unzipped into the Halfen folder. Click **OK**.
7. Click on **Close**. The .dwg files are ready for use.
